## PISTON CLAMP / WRENCH

**Piston Clamp / Wrenches** are designed to safely lift, hold, and tighten pistons during construction. The welded steel construction with replaceable tension pads and tensioning bolts for applying equal pressure around piston ensures higher gripping force than wood clamps. Each clamp has a maximum rated load of 1950 lbs.

Model PCW-24 is designed for lifting from the handles. The handles on this model are not removable.

Models PCW-47 and PCW-712 have been designed for lifting from shackles that are supplied with the units. These models are equipped with removable handles for a more compact design during storage.

Custom sizes are available. Contact EECO for more details.

**Note:** To ensure safe lifting, holding and tightening, the piston and tension pads must be clean, dry and free of oil and grease. Also Piston Clamp / Wrench must be properly tightened around the piston.

**(DURING LIFTING DO NOT ACCELERATE OR STOP QUICKLY)**

Model No.	Description
PCW-24	2-1/2" - 4" Piston Clamp / Wrench
PCW-47	4-1/8" - 7" Piston Clamp / Wrench
PCW-712	7-1/8" - 12" Piston Clamp / Wrench
